

Six Reasons to Use Mail Assure

From internal communications to customer service, email is the lifeblood of business. That makes it attractive to cybercriminals. We can help provide you with powerful, affordable email filtering and protection designed to help keep safe and keep email up and running, while freeing your team from time-consuming spam and malware mitigation.

1 Email filtering and protection

Mail Assure checks every incoming, outgoing, and internal email for malware, phishing, ransomware, viruses, spam, and other threats. Our proprietary self-learning technology draws on insights from emails sent across the Mail Assure user base to continuously update our threat database. This helps deliver strong filtering accuracy with few false positives. We also follow weekly development cycles to help keep Mail Assure updated against the latest outbreaks.

2 Email continuity

Mail Assure was designed to help provide email continuity and uninterrupted business productivity. Even if an email server goes down, users can still receive, read, and send email via a web interface supported by a network of highly available global data centers.

3 Email security made affordable

With Mail Assure, you pay per mailbox. You won't be locked into a long-term contract or forced to purchase a huge number of mailboxes upfront. Instead, you benefit from simple, predictable billing each month. And because Mail Assure is entirely cloud-based, there's no need to buy new hardware or install software on your customers' endpoints.

4 Total visibility and control over email flow

With Mail Assure's multitenant web interface, available in multiple languages, you get more control over email flow. You can set access and permission levels to allow your technicians or customers to view all quarantined messages, then release, remove, blacklist, or block those messages as needed.

5 Integration with other email services and infrastructure

Mail Assure works with any on-premises or cloud-based email service, adding an extra layer of protection to the default security features built into those platforms. Whether your customers use Microsoft® Office 365®, Microsoft Exchange®, Google® G Suite® or other email tools, Mail Assure can help.

6 Data loss prevention with email archiving

Our built-in email archiving feature encrypts, compresses, and stores all incoming and outgoing messages in Mail Assure's cloud-based vault. Through the use of encryption, including AES-256, your customers' data becomes nearly tamper-proof.
